

ACOUSTIC DESIGN OF SCHOOLS

A DESIGN GUIDE

department for

education and skills

creating opportunity, releasing potential, achieving excellence

BUILDING BULLETIN 93

Acoustic Design of Schools

Architects and Building Branch

London : The Stationery Office

DfES Project Team

Richard Daniels Building Services Engineer, School Buildings & Design Unit
Alex Freemantle Architect, Formerly of School Buildings & Design Unit
Mukund Patel Head of School Buildings & Design Unit

Acknowledgements

DfES would like to thank the following:

Editors:

Bridget Shield, London South Bank University
Carl Hopkins, BRE Acoustics, Building Research Establishment Ltd (BRE)

Principal authors:

Carl Hopkins & Robin Hall, BRE Acoustics, Building Research Establishment Ltd (BRE)
Adrian James, Adrian James Acoustics, Norwich
Raf Orłowski & Sam Wise, Arup Acoustics
David Canning, City University

Other authors and advisors:

Stephen Chiles University of Bath
David Dennis London Borough of Newham
Nigel Cogger The English Cogger Partnership
John Miller &
Theodoros Niaounakis Bickerdike Allen and Partners
Les Fothergill Building Regulations Division, Office of the
 Deputy Prime Minister
Guy Shackle Barron and Smith Architects
Julie Dockrell Institute of Education, University of London
Mindy Hadi Building Research Establishment Ltd (BRE)
Matthew Ling Formerly of Building Research Establishment Ltd (BRE)
Russell Brett British Association of Teachers of the Deaf
Richard Vaughan National Deaf Children's Society
Roz Comins Voice Care Network UK
Thomas Wulfrank Arup Acoustics
David Coley &
Andrew Mitchell Centre for Energy and the Environment, Exeter University.
Derek Poole Formerly of University of Wales, College of Cardiff
John Lloyd &
Tom Cecil Faber Maunsell
Peter Brailey Hawksmoor Engineering Ltd.
Andrew Parkin RW Gregory LLP
Terry Payne Monodraught Ltd
Wayne Aston Passivent
Tim Spencer Rockwool Rockfon Ltd
David Whittingham Formerly of Ecophon Ltd

Photographer: Philip Locker, Photo Graphic Design, Bolton

Design & Mac file: Malcolm Ward, Malcolm Studio, Croydon.

Introduction	1
Scope of Building Bulletin 93	
Overview of contents of Building Bulletin 93	
1 Section 1: Specification of acoustic performance	7
1.1 Performance standards	8
1.1.1 Indoor ambient noise levels in unoccupied spaces	
1.1.2 Airborne sound insulation between spaces	
1.1.3 Airborne sound insulation between circulation spaces and other spaces used by students	
1.1.4 Impact sound insulation of floors	
1.1.5 Reverberation in teaching and study spaces	
1.1.6 Sound absorption in corridors, entrance halls and stairwells	
1.1.7 Speech intelligibility in open-plan spaces	
1.2 Demonstrating compliance to the Building Control Body	16
1.2.1 Alternative performance standards	
1.3 Demonstrating compliance to the client	17
1.3.1 Timetabling of acoustic testing	
1.3.2 Remedial treatments	
1.3.3 Indoor ambient noise levels in unoccupied spaces	
1.3.4 Airborne sound insulation between spaces	
1.3.5 Airborne sound insulation between circulation spaces and other spaces used by students	
1.3.6 Impact sound insulation	
1.3.7 Reverberation in teaching and study spaces	
1.3.8 Sound absorption in corridors, entrance halls and stairwells	
1.3.9 Speech intelligibility in open-plan spaces	
References	
2 Section 2: Noise control	21
2.1 Choosing a site	21
2.2 Recommendations for external noise levels outside school buildings	21
2.3 Noise survey	22
2.4 Road and rail noise	23
2.5 Aircraft noise	23
2.6 Vibration	23
2.7 Noise barriers	24
2.8 Noise from schools to surrounding areas	24
2.9 Planning and layout	24
2.10 Limiting indoor ambient noise levels	25
2.11 Impact noise	25
2.12 Corridors, entrance halls and stairwells	25
2.13 Masking noise	26
2.14 Low frequency noise and hearing impaired pupils	26
References

Section 3: Insulation from external noise

Page

		27
3.1	Roofs	27
	3.1.1 Rain noise	
3.2	External walls	28
3.3	Ventilation	28
	3.3.1 Ventilators	
3.4	External windows	30
3.5	External doors	31
	Sound insulation of the building envelope	32
3.6	Subjective characteristics of noise	32
3.7	Variation of noise incident on different facades	32
3.8	Calculations	32
3.9	Test Method	32
	3.9.1 Conditions for similar constructions	
	3.9.2 Conditions for similar sources	
	Sound insulation between rooms	33
3.10	Specification of the airborne sound insulation between rooms using R_w	33
	3.10.1 Flanking details	
	3.10.2 Examples of problematic flanking details	
	3.10.3 Junction between ceilings and internal walls	
	3.10.4 Flanking transmission through windows	
3.11	Specification of the impact sound insulation between rooms using $L_{n,w}$	36
3.12	Internal walls and partitions	37
	3.12.1 General principles	
	3.12.2 Sound insulation of common constructions	
	3.12.3 Flanking transmission	
	3.12.4 High performance constructions – flanking transmission	
	3.12.5 Corridor walls and doors	
3.13	Internal doors, glazing, windows and folding partitions	41
	3.13.1 Doors	
	3.13.2 Lobbies	
	3.13.3 Folding walls and operable partitions	
	3.13.4 Roller shutters	
3.14	Floors and ceilings	45
	3.14.1 Impact sound insulation	
	3.14.2 Voids above suspended ceilings	
	3.14.3 Upgrading existing wooden floors using suspended plasterboard ceilings	
	3.14.4 Upgrading existing wooden floors using platform and ribbed floors	
	3.14.5 Concrete floors	
3.15	Design and detailing of building elements	50

4

Section 4: The design of rooms for speech

53

4.1	Approach to acoustic design	53
4.2	Internal ambient noise levels and speech clarity	53
4.3	Reverberation times	54
4.4	Amount of acoustic absorption required	54
4.5	Distribution of absorbent materials	54
4.6	Room geometry	54
4.7	Classrooms	55

	Page
4.8 Assembly halls, auditoria and lecture theatres	55
4.8.1 Room geometry	
4.8.2 Sound reinforcement	
4.9 Open-plan teaching and learning areas	58
4.10 Practical spaces	59
4.10.1 Design and Technology spaces	
4.10.2 Art rooms	
4.10.3 Floor finishes in practical spaces	
4.11 Drama rooms	60
4.12 Multi-purpose halls	61
4.13 Other large spaces	62
4.14 Dining areas	62
References	

5

Section 5: The design of rooms for music 63

5.1 Aspects of acoustic design	63
5.2 Ambient noise	63
5.3 Sound insulation	
5.3.1 Sound insulation between music rooms	
5.4 Room acoustics	64
5.4.1 Reverberation time, loudness and room volume	
5.4.2 Distribution of acoustic absorption	
5.4.3 Room geometry	
5.4.4 Diffusion	
5.5 Types of room	67
5.5.1 Music classrooms	
5.5.2 Music classroom/recital room	
5.5.3 Practice rooms/group rooms	
5.5.4 Ensemble rooms	
5.5.5 Control rooms for recording	
5.5.6 Recording studios	
5.5.7 Audio equipment	
5.6 Acoustic design of large halls for music performance	73
5.6.1 Shape and size	
5.6.2 Surface finishes	
5.7 Design of large auditoria for music and speech	75
References	

6

Section 6: Acoustic design and equipment for pupils with special hearing requirements 77

6.1 Children with listening difficulties	77
6.2 Children with hearing impairments and the acoustic environment	77
6.3 Hearing impairment and hearing aids	78
6.4 The speech signal and hearing aids	78
6.5 Listening demands within the classroom	79
6.6 Strategies developed to assist children with hearing and listening difficulties	79
6.7 Individual technology	80
6.7.1 Radio aids	
6.7.2 Auditory trainers and hard-wired systems	
6.8 Whole class technology	82
6.8.1 Whole classroom soundfield systems	
6.8.2 System overview	

	Page
6.8.3 Personal soundfield systems	
6.8.4 Infra red technology	
6.8.5 Induction loop systems	
6.8.6 Audio-visual equipment	
6.8.7 Other assistive devices	
6.9 Special teaching accommodation	87
6.10 Beyond the classroom	89
References	
7	
Section 7: Case studies	91
7.1 Remedial work to a multi-purpose hall in a county primary school	93
7.2 An investigation into the acoustic conditions in three open-plan primary schools	97
7.3 Remedial work to an open-plan teaching area in a primary school	107
7.4 Conversion of a design and technology space to music accommodation	113
7.5 A purpose built music suite	117
7.6 A junior school with resource provision for deaf children	123
7.7 An all-age special school for hearing impaired children	129
7.8 Acoustic design of building envelope and classrooms at a new secondary school	139
7.9 Acoustically attenuated passive stack ventilation of an extension to an inner city secondary school	143
7.10 An investigation into acoustic conditions in open-plan learning spaces in a secondary school	147
Appendices	159
Introduction to appendices	159
1 Basic concepts and units	161
2 Basic principles of room acoustics	165
3 Basic principles of sound insulation	167
4 Classroom sound insulation – sample calculations	171
5 Sound insulation of the building envelope	175
6 Calculation of room reverberation times	177
7 Calculation of sound absorption required in corridors, entrance halls and stairwells	181
8 Equipment specifications for sound field systems in schools	185
9 Noise at Work Regulations relating to teachers	191
10 Example submission to Building Control Body	193
Bibliography	203
List of organisations	207
